## 6.1: VIGILON CONTROL PANELS

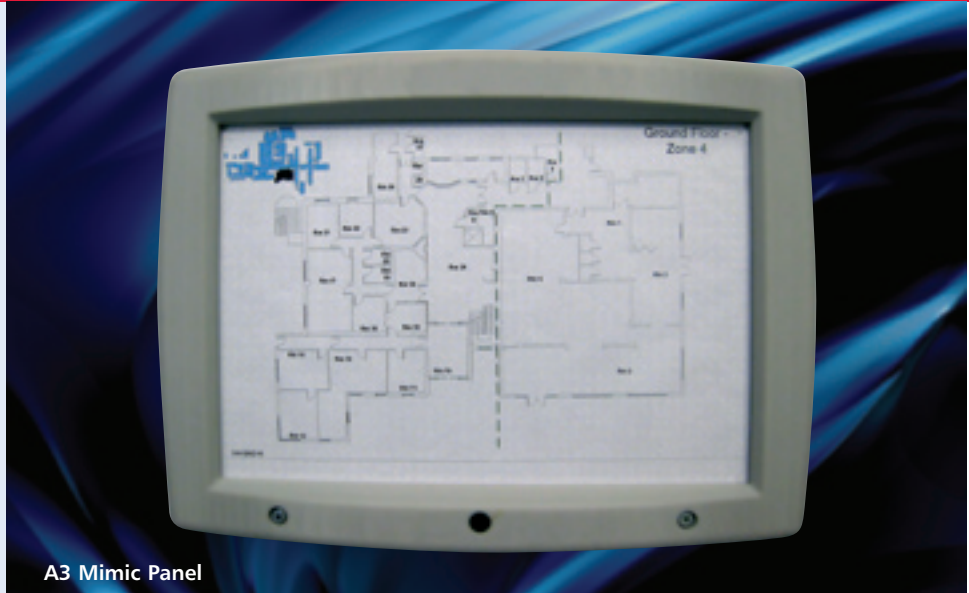

### A3 Mimic Panel

The A3 mimic panel provides a pictorial representation of a building's layout. This gives a rapid, visual indication of the location of any fire incident.

It can also be used to provide indication of fault and supervisory events in the system.

This one panel can be used as a Zonal Mimic or can hold a pictorial overlay to provide a customised view.

The A3 Customised Mimic panel can be mounted in either landscape or portrait, while an A3 Zonal Mimic panel must only be mounted landscape when using the overlay supplied.

A3 Mimic Panel
